

CarFax - Coding Assignment

Display Cars

The current project is responsible for downloading cars using CarFax REST api and display them on a homepage.

Implementation Plan

- Download and display all cars on the home screen.
- When clicked on the dealer phone number. The app should be able to make a call.

NOTE : SUPPORTS IOS 14.1 OR ABOVE.

Installation

Pod install to download the libraries.

```
cd to /path/project  
pod install
```

Libraries

- [SDWebImage](#) For loading the images asynchronously and for better caching.

References

- [Formatting Number](#) Formats the given phone number string to (XXX) XXX-XXXX
